**JCWIFI IOS Email Setup**

• Go to the Settings App.

• Select Mail, Contact, Calendars.

• Select Add Account…

• Select Other.

• Select Add Mail Account.

• Fill out Name, Email, Password, Description, and Click Next.

• Select **POP** at the top and fill in with the following settings:

      o Hostname for incoming and outgoing mail servers – **mail.jcwifi.com**

      o Username for incoming and outgoing mail servers – **your full email address** (example@jcwifi.com) – Note: It may say this is optional for outgoing. **IT IS NOT OPTIONAL**.

      o Password – email password – Note: It may say this is optional for outgoing**. IT IS NOT OPTIONAL.**

      o Click Save.

• It will display an error message saying "Cannot Connect Using SSL", Select **Yes to continue without SSL.**

• Wait until the message pops up again – this could take a couple minutes.  It will display the same error message again, Select **Yes** again

• After a couple more minutes, it should save the settings and you should receive email.
